# The BWR is a Direct Cycle Plant

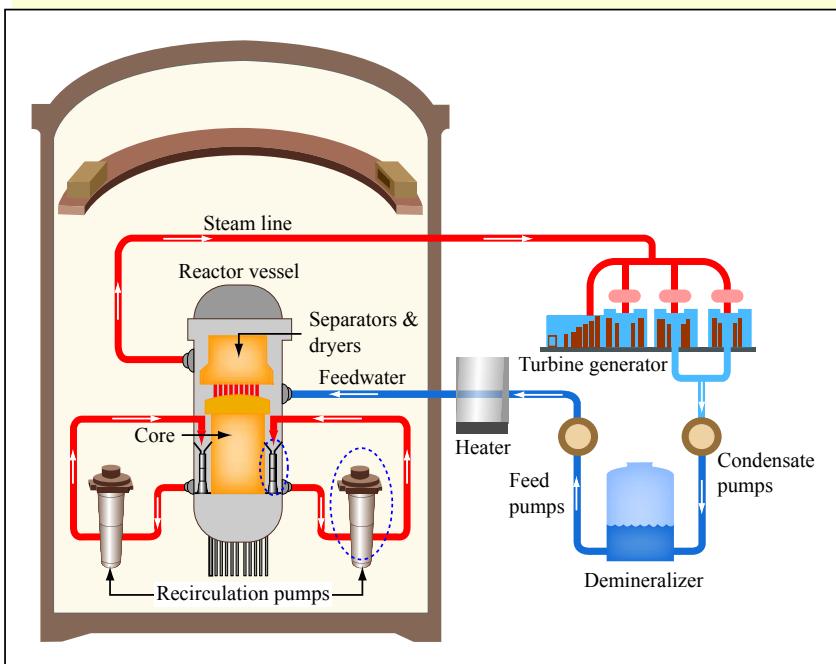

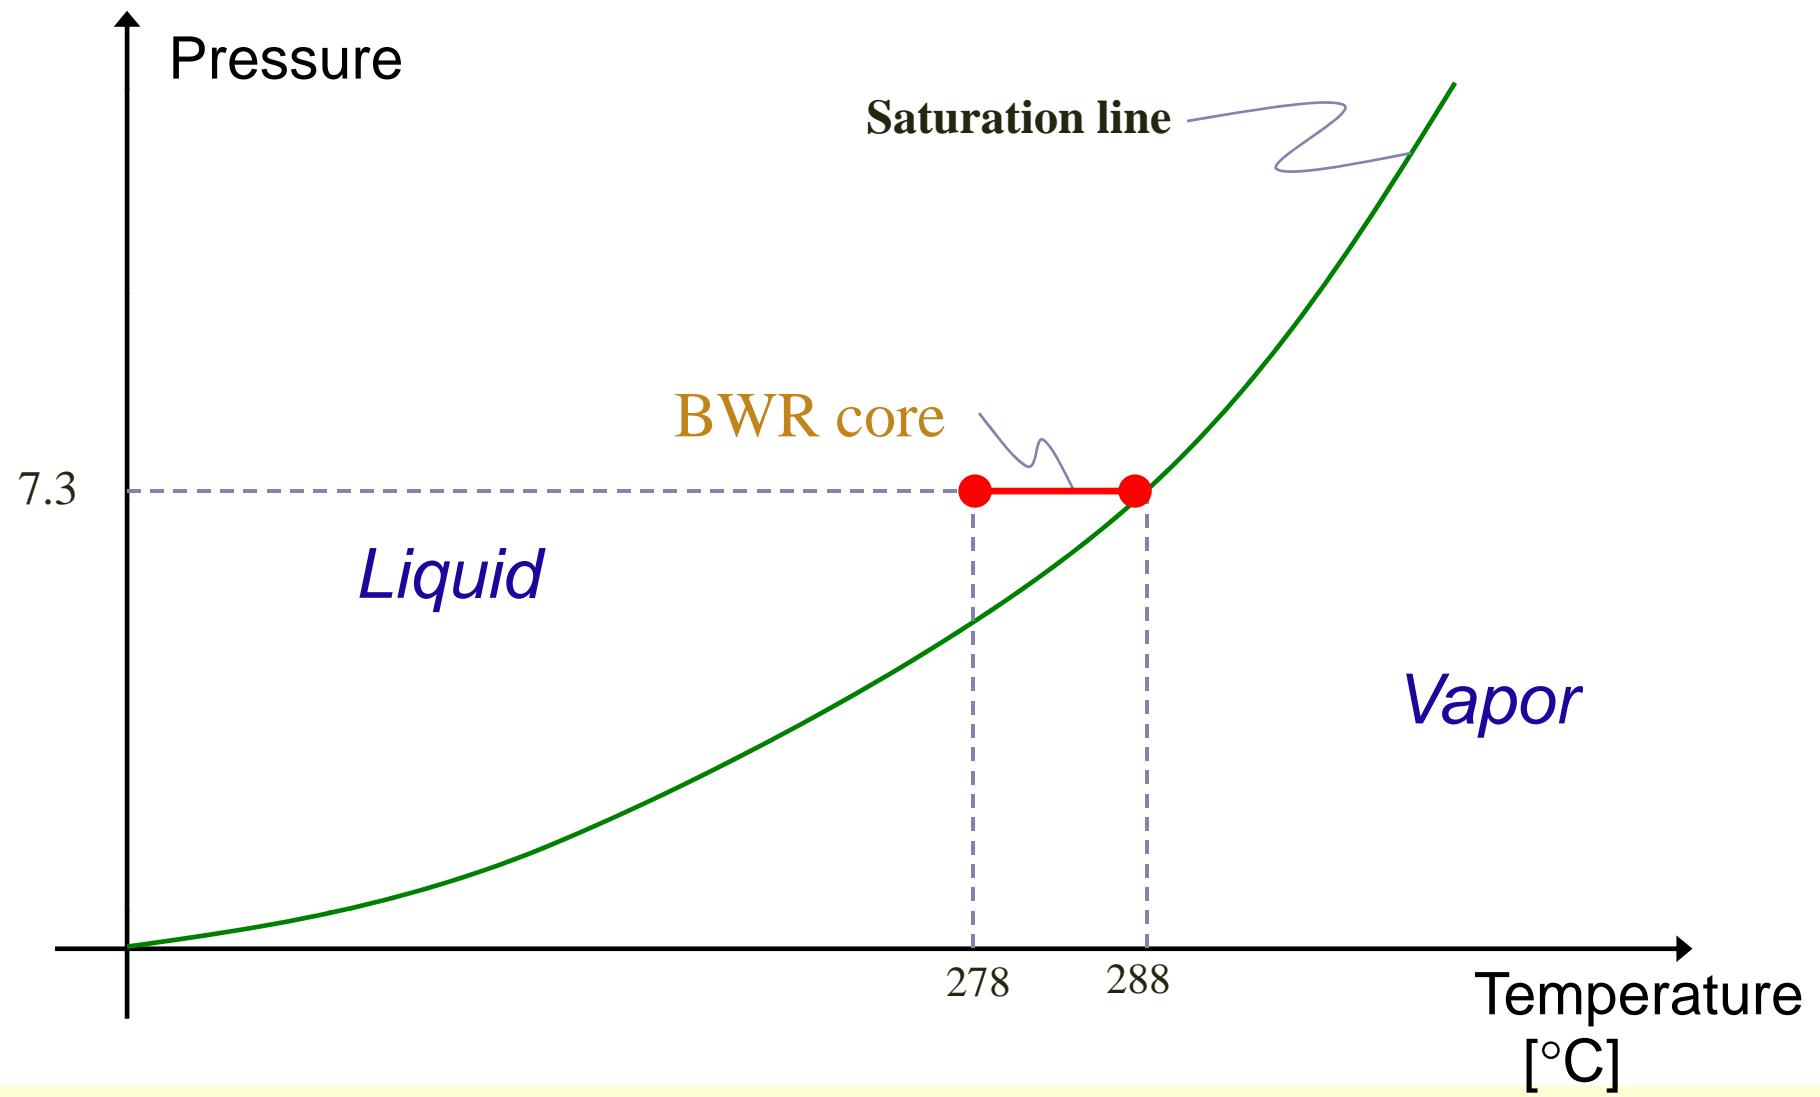

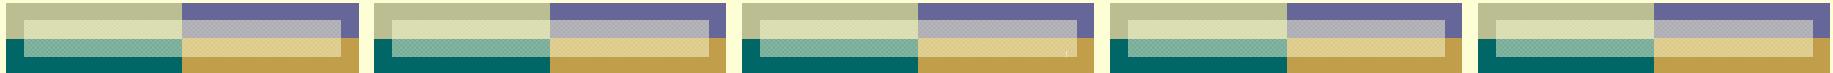

Image by MIT OpenCourseWare.

System pressure, MPa	7.136
Core thermal power, MW <sub>th</sub>	3323
Electric power, MWe	1130
Thermal efficiency, %	34
Vessel ID / Thickness / Height, m	6.4 / 0.16 / 22
Core shroud diameter, m	5.2
Number of fuel assemblies	764
Core mass flow rate, kg/s	13702
Core inlet temperature, °C	278.3
Core outlet temperature, °C	287.2
Core exit quality, %	13.1
Feedwater flow rate, kg/s	1820
Feedwater temperature, °C	220
Steam flow rate, kg/s	1820
Steam temperature, °C	287.2
Core power density, kW/L	50.5
Core flow bypass	14 %

# Fuel Assembly Parameters for 9x9 Fuel Assembly

Parameter	Value
Fuel Pellet OD (mm)	9.55
Fuel Pin OD (mm)	11.18
Clad Thickness (mm)	0.71
Fuel Pin Pitch (mm)	14.27
Active Fuel rod height (mm)	3707.9
Total Fuel Rod height (mm)	4178.7
Part Length Rod Height (mm)	2436
Fuel Pins / Water Rods per Fuel Assembly	74/2
Number of Part Length Rods	8
Inner/Outer diameter of the water rods (mm)	23.37/24.89
Duct Thickness (mm)	2.54
Clearance between duct and peripheral fuel rods (mm)	3.53
Clearance between water rods and fuel rods (mm)	1.79
Assembly Outer Dimension (mm)	137.54
Inter-Assembly Gap (mm)	14.86
Average Linear Power (kW/m)	16.46
Pressure Drop (kPa)	160
Average enrichment (wt%)	4.31
Average Discharge Burnup (GWd/t)	56
Refueling scheme	4 batches
Number of rods with gadolinia	8
Gadolinia concentration (wt%)	5
Hydrogen to Heavy Metal Ratio	4.53
Void Coefficient (pcm/% void)	-144
Fuel Temperature Coefficient (pcm/K)	-1.7
Approximate Assembly Weight (kg)	281

# Connection of BWR Core Design to Neutronics

Why are the fuel rods spaced out more in a BWR than in a PWR?

Why is the core power density lower in a BWR core than in a PWR?

What is the purpose of spatial fuel enrichment zoning throughout a BWR fuel assembly?

What function do the water rods perform?

Why are the BWR control rods inserted from the bottom of the core?

Can dissolved boron be used as a means to control reactivity in a BWR core?

# BWR Bundle Design Advances

- Extended burnup features
  - More fuel pins ( $10 \times 10$ ) for a lower heat flux
  - Heavier fuel loadings
- Improved mechanical performance
  - “Barrier” cladding
  - Low growth, wear resistant materials
- Improved operational performance
  - Natural uranium blankets
  - Flow mixing grids to enhance margin to critical power
  - Part-Length Fuel Rods (Stability, SDM)
  - Large Central Water Channels (Stability, SDM )
  - Sophisticated poison & enrichment zoning

# BWR Vessel and Vessel Internals

# BWR Vessel

Vessel bottom head  
accommodates CR penetrations

Large vessel made of ring  
forgings to avoid welds in  
the core region

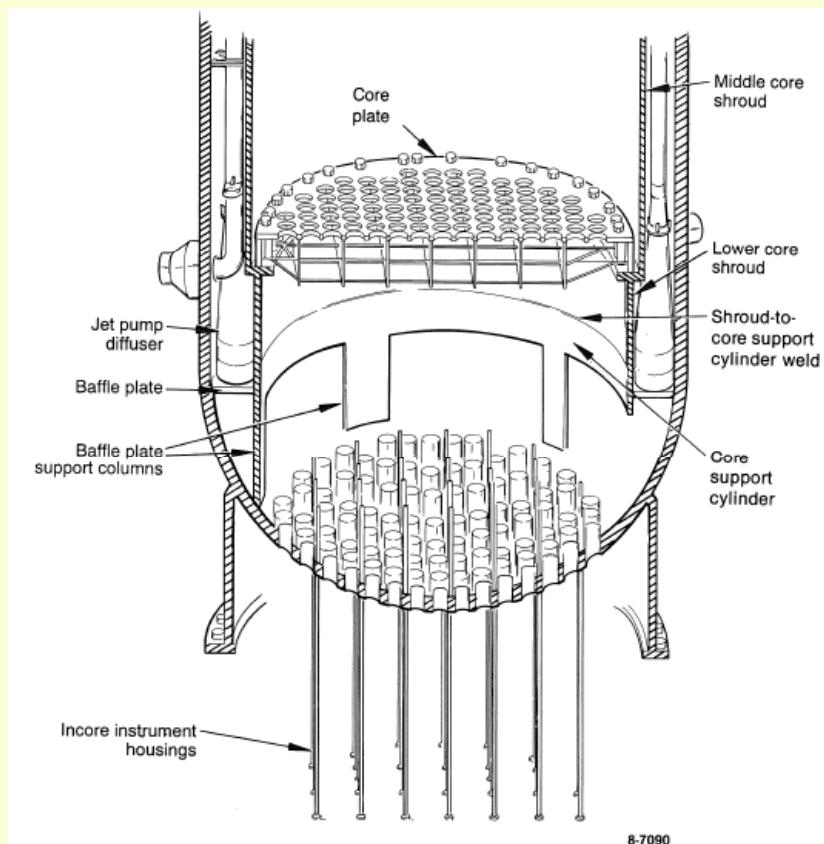

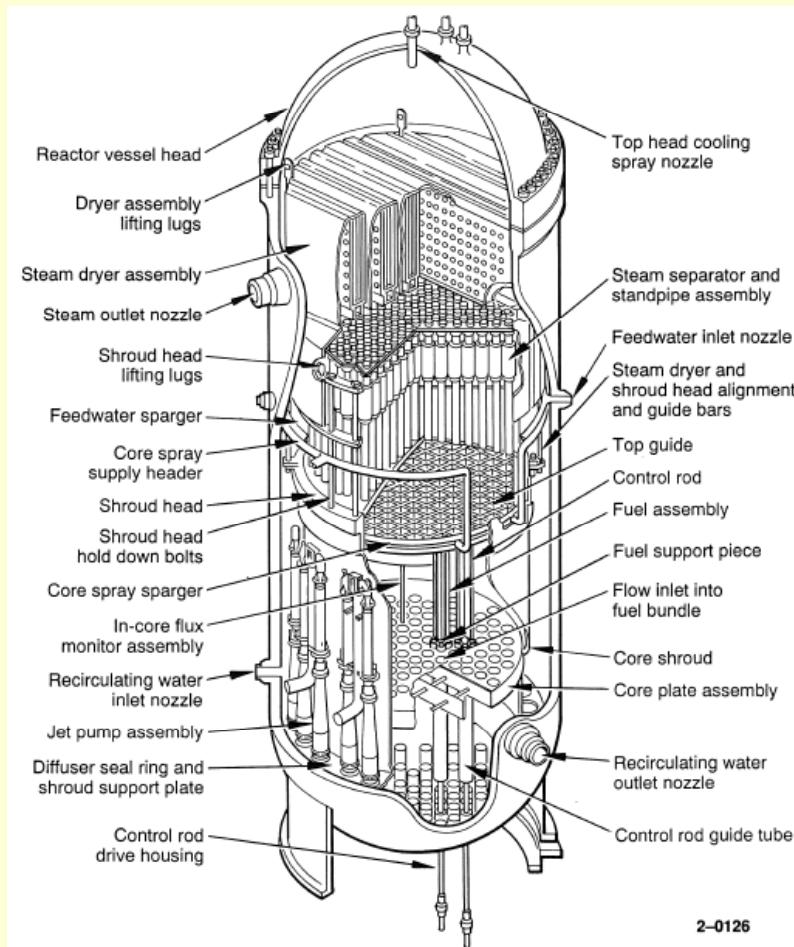

**ABWR RPV beltline forging, weight: 127 tons; dimensions:  
7.48 m outside diameter, 7.12 m inside diameter, 3.96 m high;  
material: ASME SA 508, Class 3 EQ.**

From: L.E. Fennern, ABWR Seminar – Reactor,  
Core & Neutronics. April 13, 2007.

# BWR Recirculation System

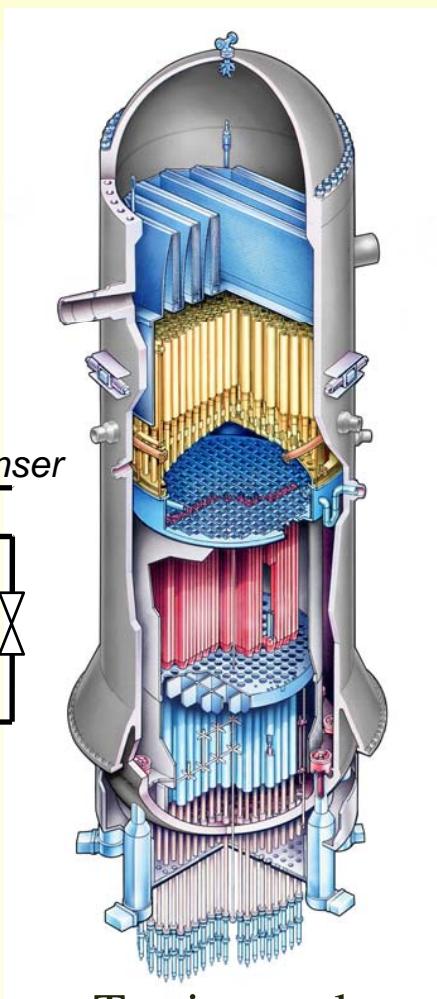

# BWR Recirculation System

BWR/6

External recirculation  
pumps + jet pumps

ABWR

Ten internal  
recirculation pumps

ESBWR

Relies on natural  
circulation

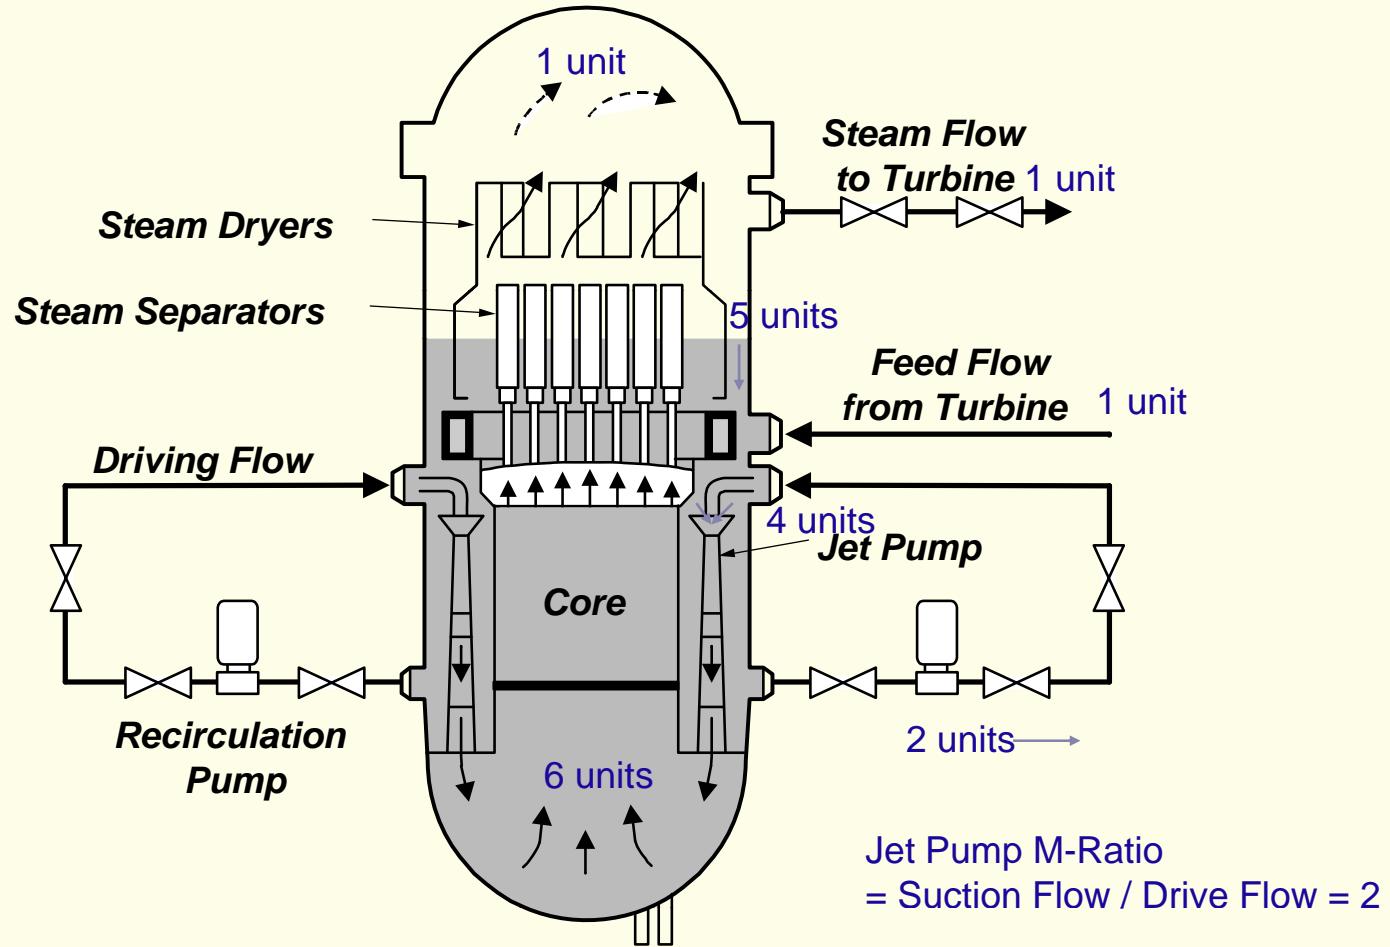

# Traditional BWR vs ABWR and ESBWR

Parameter	BWR/4-Mk I (Browns Ferry 3)	BWR/6-Mk III (Grand Gulf)	ABWR	ESBWR
Power (MWt/MWe)	3293/1098	3900/1360	3926/1350	4500/1550
Vessel height/dia. (m)	21.9/6.4	21.8/6.4	21.1/7.1	27.7/7.1
Fuel bundles (number)	764	800	872	1132
Active fuel height (m)	3.7	3.7	3.7	3.0
Power density (kW/L)	50	54.2	51	54
Recirculation pumps	2(large)	2(large)	10	Zero
Number of CRDs/type	185/LP	193/LP	205/FM	269/FM
Safety system pumps	9	9	18	Zero
Safety diesel generator	2	3	3	Zero
Core damage freq./yr	1E-5	1E-6	1E-7	1E-7
Safety Bldg Vol (m <sup>3</sup> /MWe)	115	150	160	<100
